

## Studio Server™

**More control, better performance,  
and size is no longer an issue.**

Looking for more control? Meet Studio Server. Studio Server makes it easier and faster than ever for firms to collaborate and share information in a controlled environment. With the unique combination of Bluebeam® PDF Revu® and Studio Server, security and performance are within your control. The difference? All Studio sessions are hosted on a local server, allowing IT Administrators to easily manage and monitor all session activity, and set user and file permissions - all behind the firewall.

### Why Studio Server?

#### **Protect and secure.**

Revu users can upload their confidential PDF documents to Studio Server behind their company firewalls where security is controlled and monitored by IT.

#### **Because timing is everything.**

IT Administrators can determine the number of days or months before a Studio session is archived or deleted, or choose to never delete sessions at all.

#### **Take control.**

The Studio Server administrator can set the file size, number of files, number of attendees, and size of markups that are allowed when creating or participating in a Studio session.

#### **Simple administration with total access.**

The Studio Portal allows IT to monitor all of the activity on the Studio Server including the time and date of collaboration sessions, what documents are uploaded to sessions, markups added to PDF files, session chat history, user emails, session attendees, user restrictions, and more.

### System Requirements

Windows® Server 2008/2008R2  
Windows 7 32/64 bit  
SQL Server 2005/2008/2008r2  
SQL Server express 2005/2008 IIS 7.0/7.5

#### **Recommended production configurations:**

Windows Server 2008/2008R2  
SQL Server 2005/2008/2008r2  
IIS 7.0/7.5
