

# Bluebeam: Your Single Source of Truth for Oil and Gas

As oil and gas professionals, you work in a busy and dynamic industry where construction, productivity, maintenance and safety are a 24/7 business. Digitalising your processes with Bluebeam means your team can simplify workflows, save time & money and reduce risk. Here's how:

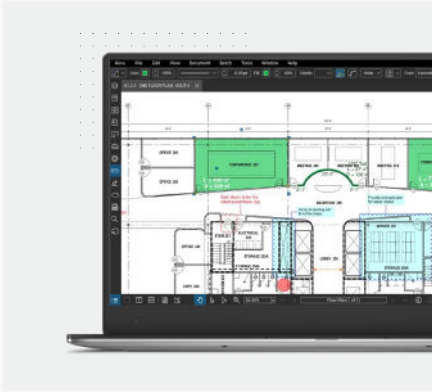

## Increase accountability, minimise risk

- Make better business decisions and gain full visibility into projects with detailed reporting.
- Improve transparency and empower real-time decision making with the Markups List in Bluebeam, which provides a full track record of everything completed.
- Securely access the latest updates from any device and reduce risk of delays by streamlining common tasks like procedural tests, P&ID reviews, estimations and site logistics.

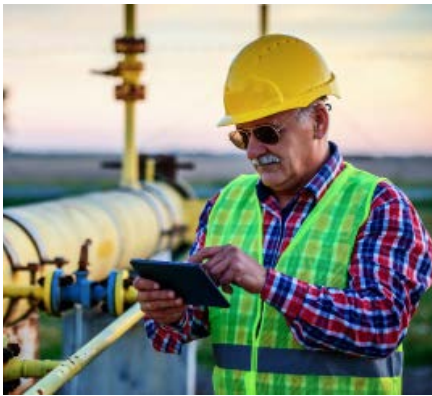

## Standardise processes for seamless collaboration

- Create customisable, shareable profiles and toolkits, tailored for oil and gas; assign custom statuses (i.e., valve open/close), import comments on mech/piping/safety, and more.
- Invite team members from anywhere in the world to mark up and measure together in real time.
- Create accurate, scaled site plans or use dynamic document creation tools to deliver searchable O&M manuals.
- Use both 2D and 3D models in a single intuitive application, from a full IFC model to an equipment detail like a valve or regulator.

## Keep up with compliance and tracking

- Centralize entire projects and maintain a digital audit trail of your team's documents with timestamped changes for full traceability.
- Carry out compliance checks against key areas like safety standards and update records with ease.
- Bluebeam is SOC 2 Type 2 and ISO 19650 certified with AWS servers in the UK, so you can securely access locally saved, cloud-based projects and collaborate with partners around the world.

## Work anywhere, anytime

- No internet? No problem. Manage projects and mark up PDFs wherever you are. Your work will be saved and ready to sync next time you're back online.
- Save time and money on travel costs knowing that all the right people can be brought together virtually, whether they're on land or on an oil rig.
- Make site inspections a breeze thanks to less reworking, more quality assurance and better accuracy.
- Coordinate and manage sites with instant access to assessments, inspection details and O&M manuals. Then create and share reports with the click of a button so management knows that everything's covered.

*Three million people worldwide are using Bluebeam. It's time to join them.*

**Work faster, smarter and more accurately with Bluebeam.**
